HOW IT WORKS

1 PROFILE

Answer questions about your organization — geography, sector, data types, entity size. Your Organizational Profile determines which regulations apply.

2 ASSESS

Applicable regulations activate structured obligations and requirements. Every obligation traces to the legal text. Cross-regulation overlap is resolved automatically.

3 ACT

Gaps identified with severity and business impact. AI-drafted mitigations, continuous re-scoring, board-ready dashboards and audit exports.

WHAT MAKES THIS DIFFERENT

Source-Grounded Compliance

Every obligation maps to a verbatim quote from the regulation. No hallucinated requirements — if it's not in the text, it doesn't exist.

Regulation-Agnostic Engine

Add a new regulation — your posture updates instantly. Remove one — it disappears cleanly. The engine works from structured data, not per-framework logic.

One Profile, All Regulations

A single Organizational Profile activates all applicable frameworks. Cross-regulation deduplication resolves overlapping requirements automatically.

Deterministic & Auditable

Structured, validated, reproducible output. The same regulation always produces the same compliance dataset. Fully explainable to regulators and auditors.
