Regulation Is Growing Faster Than Teams Can Keep Up

Siloed Assessments

Every new regulation requires a new assessment, new mappings, new evidence collection. Consultants charge per-framework, creating compliance silos.

Overlapping Obligations

GDPR, DORA, NIS2, and HIPAA share dozens of overlapping requirements — but organizations map them independently, duplicating effort.

Hallucinated Compliance

AI tools that “generate” compliance content fabricate obligations that don’t exist in the legal text. No traceability, no auditability, no trust.

THE AEGIS APPROACH

Automated Ingestion. Structured Data. Regulation-Agnostic Engine.

Automated Pipeline

Regulations are processed through an automated pipeline that extracts obligations, requirements, and controls directly from the legal text. Every data point is source-grounded — traceable to a specific article and paragraph.

Deterministic Output

The output is structured, validated, and reproducible. Strict validation guards ensure data integrity. The same regulation always produces the same compliance dataset — auditable and explainable.

Instant Activation

Add a regulation and your compliance posture updates immediately. Remove one and it disappears cleanly. The engine works from structured data, not per-framework logic. New frameworks onboarded in under 48 hours.

From Organizational Profile to Compliance Posture

1

PROFILE

- Answer questions about your organization
- Geography, sector, data types, entity size
- Organizational Profile determines applicability
- No per-regulation questionnaires
- Subsidiaries inherit and extend the profile

2

ASSESS

- Applicable regulations activate automatically
- Structured obligations and requirements appear
- Every obligation traces to the legal text
- Cross-regulation overlap is resolved
- Risk scoring across 40+ domains

3

ACT

- Gaps identified with severity ranking
- AI-drafted mitigations with evidence needs
- Treatment pipelines track remediation
- Continuous re-scoring as controls mature
- Board-ready dashboards and audit exports

COVERAGE

EU & EEA

GDPR, DORA, NIS2, AI Act, CRA, DSA, DMA, ePrivacy

Financial

PCI DSS, SOX, EBA Guidelines, MiFID II, PSD2

US & State

HIPAA, CCPA/CPRA, NIST 800-53, FedRAMP, GLBA

Standards

ISO 27001, SOC 2, CIS Controls, CMMC, CSA STAR

Built Different

Source-Grounded Compliance

Every obligation maps to a verbatim quote from the regulation text. No hallucinated requirements. Full traceability from control to article to paragraph. Auditors can verify any compliance claim against the source material.

Regulation-Agnostic Engine

The engine doesn't have per-framework logic — it works from structured data. New regulations are onboarded in under 48 hours. The architecture scales to any regulatory domain without re-engineering.

Continuous, Not Annual

Every change to your profile or controls triggers automatic re-evaluation. Your compliance posture is always current — not a point-in-time snapshot. Real-time evidence replaces months of manual audit preparation.

One Profile, All Regulations

A single Organizational Profile activates all applicable frameworks. Cross-regulation deduplication resolves overlapping requirements automatically. Add or remove regulations without re-assessment.

Deterministic & Auditable

Structured, validated, reproducible output. The same regulation always produces the same compliance dataset. Every step is explainable to regulators, auditors, and board members.

Group & Subsidiary Ready

Centralize oversight across your entire group. Each subsidiary maintains its own Organizational Profile while inheriting group-level policies. One dashboard for the holding company, full autonomy for each entity.
